Protecting Human Rights and Freedoms.
Exposing the Technology of Enslavement

Author:

Oleksandr Mishcheriakov

Reality

The conditions of human existence differ from generally accepted standards in the field of human rights not only for political and economic reasons. Human freedoms are destroyed by inhuman progress, which destroys the root foundations of all human achievements

Technical slavery

In defiance of not only international law, human rights, but also the religious foundations of all major religions of the world, unscrupulous forces have developed micro-devices that, through implantation into the human body, destroy freedom, rights, law and nature.

The comprehensive awareness of the proper problem - explains that every sector, including politics, economics and security, where people work - is no longer an environment of independent people.

More than 4.7 billion Muslim, Christian, Jewish and Buddhist believers, who have inherited their religion from previous generations over 2,500 years, are on the brink of disaster as the forces of evil challenge human history.

More than 193 countries with many years or centuries of history have faced state collapse, namely, the loss of independence, state secrets and confidentiality. This also destroys constitutional systems, state legislation and military-strategic potential

The peoples of all countries, including the ruling contingent, become slaves and return to a life where there are no rights, laws, freedom, statehood, protection and order. In this way, inhuman progress forms an unprecedented scale degradation of human nature and destroys all previous achievements.

Life, where the earth belongs to man, and man belongs to himself and/or God, is coming to an end. And that is why the project Freedom for Humanity, despite the risks and difficulties, must take place.

Appeal to healthcare workers

Guided by the data of the American Museum of Natural Sciences, abstracting from modernity, and then comprehending modernity comprehensively - we ask you to realize the importance of preserving human nature in its foundations, which does not exclude the right to develop modern areas of medicine such as bioengineering, neurobiology and others, but in accordance with the principles of scientific humanity and compliance with the basic rules of legal behavior.

The continued use of general terms and references to medicine does not preclude the belief that in all areas of health care there are ethical professionals who are empowered to make informed judgments about both the medical program and safety in general.

Technology

The human body has about 72 km of nerves.
Each nerve is a potential conductor of this technology to your brain and body:

[Human nervous system: part №1](#)

In this animation, we will describe the human nervous system in a very detailed way.
Here we first focus on the spinal cord and the periphery.

00:16 Central and peripheral nervous system
00:59 Structure of the spinal cord
01:35 Afferent and efferent spinal nerves
02:08 Structure of a nerve
02:24 Structure of a nerve fiber
03:00 Structure of a nerve cell
04:01 Vesicles and neurotransmitters in the terminal button
04:53 Transmission of signals via synapses
05:53 Spinal ganglion and sensory nerve fibers
07:07 Transmission of impulses to the brain
07:53 Mechanoreceptors of the skin
09:19 Conduction of impulses through white and gray matter
10:21 Reflexes

[Human Nervous System: Part№2](#)

This animation describes the human brain with breathtaking images.

00:00 Opening
00:08 Brain development in the womb
00:30 General structure of the brain
01:44 Skull and meninges of the brain
02:26 Subarachnoid space
02:52 Ventricles
03:26 Gray and white matter
03:36 Nerve cells of the brain
04:33 Different types of nerve cells
05:00 Cerebral cortex and neocortex
05:20 Alzheimer's disease
05:47 Prefrontal cortex
06:04 Broca's area
06:13 Motor cortex and somatosensory cortex
07:01 Thalamus
07:53 Corpus callosum
08:24 Hypothalamus
08:44 Limbic system
09:17 Human cerebellum
10:00 Pituitary gland
10:15 Pineal gland

Practice of implantation

In this [video](#), which was uploaded to YouTube 9 years ago, you can see microchips for dogs, which are the size of a grain of rice. These chips are freely available, you can buy them for your pets on Chinese marketplaces to make sure that microchips that can be implanted into a living organism exist. Chips for dogs are taken as an example so that you can now imagine microchips for people, which are not freely available. As you understand, chips for people are much smaller than chips for dogs, that is, much smaller than a grain of rice, which means that we are talking about devices that can hardly be detected by the human eye.

[Tooth anatomy](#)

Material developed by **Amerra Medical**

One of the main branches of medicine for implanting technology into the human body was dentistry. Dentistry, which is used by a huge number of people, has access to the nervous system during the process of removal, filling with the use of anesthesia.

Using this access, dentists install a device that is difficult to detect even by traditional images. Often, to remove this device (evil technology) - it is necessary to use special equipment for microsurgical work.

The visual characteristics of microchips may vary, depending on the period of production, assembly and technical elements. They can probably be of different shapes, even something resembling wires, which indicates extremely miniature sizes.

Slightly less often, surgery is used to implant the device into the human body. Any operation gives doctors access to the human body.

Chips consist of several components, but the main component is the information transmitter, which will be discussed in the next block.

Path of development

Initially, enemy forces used this technology to control foreign intelligence agents during the period when there was an "iron curtain" with the Soviet Union. It is important to note that in those years, in the absence of modern technologies in data transmission and programming, and also taking into account a certain level of achievements of that time in medicine, this technology was less functional, but especially secret. After the collapse of the Soviet Union, the diverse interstate interaction of post-Soviet countries in the conditions of state independence and democratic development ensured the introduction of this technology into Western life. To introduce the technology, enemy forces used various complex combinations and methods, since the technology provided the basis for espionage.

From the 2000s to 2010, the enemy forces were able to organize the production of components, assembly of the device, logistics support and most importantly, by this time the evil forces managed to recruit medical workers in many countries, thereby creating a strong and rapidly growing system.

Official evidence confirms that post-Soviet forces are behind the technology's control. Previously, an appeal was made to the **Russian Federation** proposing the disclosure of the technology in a specific sequence of actions as a tool to absolve Russia of responsibility for the so-called war in Ukraine. The proposal was rejected.

Official appeals to **Ukraine** were also made, requesting disclosure of the technology and explaining that military secrets in hot spots were lost due to this technology and Russia's ability to spy. Assisting military espionage is treason, but Ukraine, like Russia, is not interested in the liberation of humanity or the protection of rights and freedoms. — Upon request, official data and information may be provided to the requesting party.

The information is not published in the report due to the political context.

Cosmos

The receiver device (chip) transmits information to the satellite, which serves as an information transmitter:

[GPS - GALILEO - GLONASS](#)

The receiving party is the headquarters of Russian structures:

www.dw.com/ru/nos-rossijskie-hakery-atakuut-evropejskie-sputniki/a-70796846

If this case is reliable, then the hacking of European satellites means that, in principle, the evil technology is open to both Russian structures: both the Russian structure that initially controls the technology and the one that is thirsty for establishing control as well. The world of Russian structures is the world of animals, where there are no rules. They do not take each other into account, striving to gain power at any cost.

Headquarters

Data processing, espionage, event preparation and the use of people are carried out by organized headquarters, as well as by individuals who have access to special software.

Software

Functional

MAPS

Maps allow you to quickly navigate and use the technical capabilities of the software to meet your needs

LOCATIONS

The exact location of the definition creates the possibility of ensuring the processing of persons and the creation of the process

HUMAN NATURE

The human brain consists of many parts, the work of which is controlled by neural connections. Neural connections in the brain are electrical impulses, the effect of which is also influenced by the nervous system. Proof of this for people far from neurobiology is pain and sex. The latter is especially explainable, since the nerve endings on the genitals are capable of changing the perception of life, thinking and the general physiological state of a person, for which the human brain is responsible. This also explains that the nervous system really affects the work of the brain, therefore, certain threats can come through the nervous system, which destabilize the full work of the brain.

The human brain, as a biological organ, is adapted to the conditions of natural work in natural conditions, accordingly, outside interference is a hindrance, including due to the lack of scientific progress in the field of full (100 percent) study of the human brain. Therefore, with the help of evil technology, they can block the work of some parts of the brain due to manipulations with the nervous system. Due to certain manipulations with the nervous system, the structures of Russia are capable of causing great tension, a nervous state, even aggressive behavior, and, conversely, lethargy, fatigue and the inability to lead a healthy life. Human memory is something that, unfortunately, is subject to negative influence on the human mind. At the very least, to various manipulations. That is why different carriers of technology sometimes consider themselves crazy, or are subject to information-psychological processing, evaluating their fresh mind after limited memory work - someone else's mind, or certain data of human memory, emerging in human consciousness as the fruits of thoughts of third parties. The technology of evil itself sounds fantastic for ordinary society and it is this factor that serves as a strong stimulant for parallel information-psychological processing, which ultimately zombies people and changes the perception of human life.

PROCESS

With its wide range of possibilities, this technology opens up the possibility of carrying out all sorts of manipulations with society or individuals. Manipulations based on human control and espionage provide the opportunity for Russian structures to carry out sabotage, terrorist acts, influence political processes and human behavior as a consequence. That is why today the entire structural life of the planet, be it official special services and law enforcement agencies, or illegal associations - the entire systemic world is under the control of Russian special services.

Fortunately for us all, the intellectual level of the governing environment is at an extremely low level, which is why the planet has a chance of being saved.

HUMAN NETWORK

As has already been stated, evil technology opens access to the human body and human life, which in fact creates conditions for 24/7 espionage.

Human errors, sexual recklessness, various other vices, sins or violations of the law - sooner or later turn a person into a slave of the system. Therefore, the structures of Russia have a huge network of recruited people who can do nothing. These are not only ordinary people, ordinary citizens of different countries and ordinary representatives of different nations. Among them are also very influential people who cannot protect themselves.

Therefore, for the liberation of humanity - the illegality of espionage as an existing law in all countries excludes liability for offenses, and espionage as an open form of enslavement of man and life - gives a person the right to self-defense and restrictions on the presence of any content on the Internet, if it is prohibited either from the point of view of the law, or from the point of view of human rights and personal preferences.

DATA BASES

Databases are a system for storing information about the carriers of this technology. Databases are organized, structured, with the distribution of information classification, dates, tags, locations, etc. The most important thing is that somewhere in the world there are servers on which the storages are located. This can be any data center, but so far there are no hackers or IT specialists in the world who could find, hack and disable them.

INFORMATION SPACE

The information space is a separate world. Here, one can give explanations endlessly, since the methods of creating, using and disseminating information are limitless. Here, it is important to establish two main types of information:

1. open information
2. veiled information

Both the first and second types of information, within the field of their own influence, are created by Russian structures in the normal mode from existing and working headquarters. The basis, as an information and communications structure, is special services, social networks and news.

Appeals

To Tesla and Elon Mask

"In anticipation of the upcoming presentation, which will take place on October 10, 2024, I hasten to express my gratitude for the fact that by bringing information about robotics to the media, you thereby counteract skepticism about the existence of sinister technology, since you allow people to understand how high technical progress is. You explain what such fields as bioengineering + IT + neurobiology are capable of when organized as a whole. I would be extremely grateful if you, through the Optimus robots, showed society the ability to look through Optimus's eyes, letting people understand that anti-human scientific progress is unfortunately at a very high level. It is important to say here that our enemies, the structures of Russia, in order to hide the inhuman scientific progress, will attribute any form of evidence about the presence of sinister technology to the Optimus robots. Therefore, on behalf of humanity in need of salvation, I ask Tesla to create a database that will store geolocation, video and audio data received from robots. This is so that Russian structures do not confuse the public and are unable to preserve evil technology under the guise of robotics, which is not devoid of humanity and law. Also, as a generator of ideas, I have thought about this a lot and several years ago, in audio messages I thought about the future of robotics, tea if necessary I can share with you, if this was not done by Russian spies in order to get closer to the founder of Tesla. P.S. I still don't give the right to use my voice without my permission".

To META

"One of the biggest strategic mistakes of the special services of Russia is the fussiness leading to emergency measures to save the technology of evil. This is how they, with their own mistakes, reveal those functions that are known to us, but which they did not want to talk about in order not to undermine public peace and not to cause additional unrest. Unfortunately, the activity of the structures of Russia creates the need for countermeasures, and that is why Freedom of Humanity is forced to mention this function. Yes, the nervous system and nerve endings serve as an opportunity to observe through human eyes, and therefore spy on a person and his life in absolute. And that is why, quite fussily they (Russian structures) are trying to hide it, presenting their previous mistakes (partial publication of information obtained through biological espionage through evil technology) - smart glasses. Today, in October 2024, smart glasses are not gadgets for mass consumption, this device is more for geeks, but not for mass use. Different companies are working on smart glasses, but today they stand out, are quite rare devices and always cover the bridge of the nose, plus the eyes can do what cameras cannot - movement. Therefore, I propose that Meta Corporation implement the following principle into smart glasses: a cryptographic stamp that will indicate that the filming was done with smart glasses and claim that this is an original product of Meta, which cannot be counterfeited and which will be in a special database".

MONARCHY

Mentioning the modern monarchy in the context of the problem of modern slavery or in the context of freedom requires special care, since the position of the monarchy as a whole is quite complex, requiring both the support of monarchs and sometimes causing disagreements of various kinds. First of all, ordinary people should not lose sight of the fact that the monarchy is an environment of definitely influential people, so the monarchy or individual royal houses or individual people from one or another royal family can be very useful in shaping a free future. In order to form security and adhere to certain principles, mentioning names that are associated with technogenic slavery, that is, "sewn-up" monarchs, representatives of royal families who became slaves like ordinary people - giving specific examples of such monarchs may be a hasty action for now, implying wide coverage of information. But explaining to the world the reality in which many countries where royal families still exist may find themselves is a matter of general freedoms.

Scheme 1

When it comes to absolute espionage, it is important to realize that we are talking about the real reality, the one that has everything that reality is. Therefore, in the conditions of this awareness, we understand that representatives of royal families are people like others who can engage in all sorts of sex, make mistakes, succumb to temptations, do some stupid things, use drugs, and so on. After being sewn up, monarchs find out that they are compromised, their lives turn into hell. They begin to be traitors to their families, their countries and peoples. Such monarchs provide great opportunities in the Western world for enemy forces, they serve as a cover, they give support to our enemies and the enemies of humanity. And unfortunately, this is not an analytical assessment of the vulnerabilities of the monarchy, but a practical study of reality.

Scheme 2

One of the most convenient forms of cover for the enemies of humanity is force, and therefore high society. Unfortunately, we know that some representatives of royal families have partial access to technology, thereby giving them a sense of their own influence, which in fact is deception and simple use. This ensures the sustainability of the technology. Here it is important to say that the forms of cover for the structures of Russia are different, so hatred of the monarchy is not the right attitude. In the monarchy there are both slaves and villains.

Scheme 3

Because of the possibilities that technology opens up — the structures of Russia manage and manipulate internal relations and inter-royal relations. There are consequences from these processes, which only confirms and proves that the monarchy as a whole is in the same difficult position as ordinary people. Many royal families exist for 1000, 600, 400 years and here is the time, the 21st century, where the monarchy and ordinary society have one problem. For smart monarchs, this is a chance to strengthen their greatness, and for stupid ones - to remain in the emptiness of a destroyed life.

SOLUTION

In order to preserve cultural and national values, history, security of the peoples of those countries where there is a monarchy, to provide protection to members of royal families and to form international security - whatever comes from the technology of evil cannot and should not be a subject for condemnation of members of royal families. Only in this way can we save the monarchy and contribute to a free future without losing centuries-old values. This principle should be a common agreement in the context of understanding that Russian structures will exert pressure and take decisive action. Corporations must remove such information from the Internet and the media.

Political side

In connection with the extremely difficult situation of the Russian special services due to a series of global mistakes and failures, such as the "war" in Ukraine, fake cryptocurrency, the destruction of the European Union, the secession of Texas from the United States, an unsuccessfully organized attempt to organize a war in Yemen, the disclosure of the influence of Russian structures on the Israeli and Muslim sides in the Gaza Strip conflict, a series of unsuccessful special operations (chemical attack in Syria, Skripal poisoning in the UK, the arson of Notre Dame Cathedral in Paris, the collision of ships in the Kerch Strait, the terrorist attack in India, trains in the Netherlands and Switzerland, exploitation of the UN, hacked software of law enforcement agencies in France and Switzerland, and so on) - all these events over time shape the positions of influential circles of different countries and peoples who have encountered the activity of the Russian special services.

Considering that the entire structural power of the special services of the Russian Federation was concentrated around this evil technology - its destruction actually means the destruction of their system. Therefore, making maximum efforts, using the entire extensive toolkit, Russian structures tried to find cover in the USA and other countries. That is why, in recent years, it has been extremely difficult to ensure transparency in this matter and only thanks to a separate private case, due to the peculiarities of the life of the creator of the project Freedom of Humanity, which was like hell in life, a concentration camp in freedom, a prison without imprisonment - it was possible to construct transparency and the order of assessments, and therefore counteraction. The latest processes of Russian structures, such as the "war" in Ukraine - a critically serious problem for them in a comprehensive understanding of seriousness. This is a strong blow to the Russian economy due to their debt obligations, the amount of which is confidently approaching one trillion dollars, the destruction of their position in world politics, where ten years ago Russia was in the top five most influential countries in the world, and so on.

Therefore, in search of a way out of the situation, where a way out of the situation for Russian structures means a deviation from debt obligations and the absence of an international military tribunal - the gaze of Russian structures fell on the technology of evil. Perhaps they will try to tell the world that the war is a consequence of the technical impact of technology on the nervous system and the work of the brain of especially important representatives of Russia, but this will be another mistake, since we claim with full responsibility that the Russian Federation is not interested in the destruction of technology, and any attacks against technology can be a consequence of exceptional inaction. In 2024, Russia received a very serious initiative, known to political circles and the world of special services, where Russia could destroy the technology of evil in fact in exchange for impunity and the absence of debt obligations. At that time, the structures of Russia were testing their illusions and were confident that they could do without it. But today, in October 2024, they understand that there is no way out. And perhaps this is the only thing in which one can agree with the structures of Russia: there is no way out.
